SUMMARY

Software Developer specializing in Laravel, PHP, MySQL, and AWS for building secure and scalable web applications. Experienced in developing RESTful APIs, GIS-based features, and database-optimized systems for large-scale telecom platforms. Experienced in AWS, Docker, Kubernetes, CI/CD pipelines, and microservices-based cloud-native environments.

SKILLS

Languages	PHP, JavaScript, Java
Frameworks	Laravel, Livewire, React, Tailwind CSS
Cloud & DevOps	AWS (EC2, ECS, EKS, S3, Lambda, VPC, ELB, Route 53, RDS, CloudFormation, CloudWatch), Docker, Kubernetes, GitHub Actions, CI/CD
Databases	MySQL, PostgreSQL
Tools	Git, GitHub, Linux, Postman

PROFESSIONAL EXPERIENCE

Junior Software Developer January 2025 – Present
Azotos Software Technologies Pvt. Ltd.

Project: BSNL BharatNet Phase III — National fiber optic infrastructure management system

- Developed and maintained a scalable Laravel-based telecom infrastructure management platform, implementing backend features and optimizing application performance for multi-region operations.
- Implemented data synchronization enhancements and GIS-based network visualization modules, improving real-time asset tracking, operational visibility, and system reliability.
- Designed and optimized RESTful APIs to support seamless integration between web and mobile applications, improving data consistency and system efficiency.

PROJECT EXPERIENCE

Cloud-Based File Storage Web Application [🔗 Source Code](#) 2025
Technologies: Laravel, Docker, AWS S3, REST APIs

- Developed a secure cloud-based file management web application using Laravel and AWS S3 with role-based access control for scalable file storage and management.
- Containerized the application using Docker and implemented CI/CD workflows using GitHub Actions to ensure consistent development and deployment environments.
- Developed RESTful APIs for secure file upload, download, and access management with authentication, validation, and optimized backend processing.

EV Charging Station Locator and Reservation Platform [🔗 Source Code](#) 2025
Technologies: Python, JavaScript, HTML, CSS, MySQL

- Developed a full-stack EV charging station platform enabling users to locate nearby charging stations, monitor real-time slot availability, and reserve charging slots efficiently.
- Designed and optimized a relational database schema to manage charging station inventory, booking records, and real-time availability with improved data consistency.
- Implemented secure booking conflict prevention and validation logic to ensure reliable reservation handling across concurrent user sessions.

EDUCATION

Bachelor of Engineering (B.E.) in Computer Science and Engineering Apr 2020 – May 2024
E.G.S. Pillay Engineering College — Tamil Nadu, India

CERTIFICATIONS

- Fundamentals of Docker and Kubernetes — Scaler
- Cloud DevOps Roadmap 2026 — GUVI (HCL)
